

STOP PAYING TO HAUL SEPARATOR WATER!

**THE LAST MISTER/EVAPORATOR
YOU'LL EVER BUY**

**EXTREMELY RELIABLE
3 YEAR
"BUMPER TO BUMPER"
WARRANTY**

**EASY INSTALLATION
ALL PARTS INCLUDED**

**INEXPENSIVE TO OPERATE
No costly filter cartridges
uses replaceable inexpensive
granulated carbon and only a
small amount of compressed air**

**Complies with Federal, and
most State and Local
environmental regulations**

**Gives an audible and visual
warning when a carbon change
is required**

**Gives an audible and visual
warning if a problem occurs
during machine operations**

**No messy water handling
connects directly to the dry
cleaning machine and has a
large funnel for adding vacuum
water**

SO RELIABLE, YOU'LL FORGET IT'S EVEN THERE!

REMOTE NOZZLE WHICH
EVAPORATES THE PURIFIED WATER
IS MOUNTED ON THE ROOF OR
EXTERIOR WALL

SAHARA
\$1,895

MACHINE SPECIFICATIONS

PROCESSING VOLUME	APPX. 2.5 GAL/HR.
COMPRESSED AIR CONSUMPTION	.35 SCFM@65 PSI
ELECTRICAL CONSUMPTION	.1 AMP @ 110 VAC
FOOT PRINT	12 INCH X 10 INCH
NET WEIGHT	22 LB..
CRATED WEIGHT	35 LB..

EZ TIMERS
MANUFACTURING

WHY THE SAHARA IS THE BEST MISTER/EVAPORATOR ON THE MARKET

TOTALLY CORROSION PROOF WITH 3 YEAR WARRANTY

All wetted parts of the SAHARA are constructed of nylon, PVC, polyethylene, brass or stainless steel. These material provide total corrosion resistance allowing EZtimers to provide a three year total warranty

NO EXPENSIVE CARTRIDGES PURIFIES WATER WITH INEXPENSIVE GRANULATED CARBON

The SAHARA uses inexpensive easy to refill GRANULATED CARBON available at most pet stores. A carbon change is like refilling a drip type coffee maker. *Competitive machines require expensive filter cartridges that must be disposed of when saturated.* In addition, we continuously circulate water through the carbon filter, instead of the single pass method used by competing products. This provides significantly improved performance and carbon life, providing approximately 500 gallons of processed water between carbon changes. The SAHARA signals when a carbon change is required.

SMART DESIGN WITH A LONG HISTORY OF RELIABLE PERFORMANCE

Simple methods of moving water through the various parts of the SAHARA are the reason for its amazing reliability and there is no simpler way to lift water than the air operated lift pump. Just an air tube inside of a plastic pipe with no moving parts.

NO DANGEROUS HEATING OF FLAMMABLE SOLVENTS

Instead of expensive, energy intensive electric or steam heating the SAHARA uses a simple air atomization nozzle to evaporate the purified water. This nozzle smashes water into tiny droplets which evaporate almost instantly. Our unique filtration system puts an end to any nozzle clogging.
